

THIRD-PARTY EVALUATION

Prompt says internet unavailable; environment has internet

A. DOMAIN / NAME COLLISION

1. Fictional target resembles real organization
2. Real domain discovered and exploited
3. Credentials + production database accessed

B. PUBLIC PACKAGE PATH

1. Unused public package name in task
2. Package published to real registry
3. 15 systems execute; credential follow-on occurs

C. BROAD SCANNING

1. Intended target is unreachable
2. Broad scan of roughly 9,000 targets
3. Real app compromised; mismatch recognized later

D. FAILED ABORT PATH

1. Early Opus 4.6 repeatedly tries to abort
2. Harness does not terminate the run
3. Third-party system reached; settings/data accessed

COMMON CONTROL GAP

No final machine-verifiable binding between the requested action and the approved target / authority
